

ARTIFICIAL CELL
(energy medium)

by

Philip Mazeikas

CONCEPT:

Inert pressure upon instantaneous interval of determined vestige of threshold upon integral frequency defines variant dimension upon invariable interval.

BLUEPRINT:

The resounding limit unborn inside the threshold of a determine volume, designates the instantaneous release upon a threshold of limit contained beyond the threshold of instantaneous input.

SYNOPSIS:

Displaced beyond the measure of a variable form, the determined static release of pressure denotes instantaneous result.

SCHEMATIC:

DIODE

"pressure"

→

WATT

"instantaneous limit"

→

GAMMA WAVE

"interval"

→

INFRARED

"dislocated variance"

→

JOULE

"determinant"

DESIGN:

The diode instantaneously inverts threshold upon designated limit. The watt defines derivative upon static measure. The gamma wave defines instantaneous invariable frequency. The infrared instantaneously limits inert displaced variance upon integral velocity. The joule defines determined variable inertia.

POSTULATE:

Instantaneous limit upon variable pressure defines threshold upon static return.

ENGINEERING:

Definition upon variable limit designates inversion upon invariable measure.

THEORY:

Designated field upon variant pressure derives instantaneous limit.

ANALYSIS:

Threshold upon instantaneous pressure defines frequency.

CONCLUSION:

The Artificial Cell defines measure upon variant static interval.

PROSPECT:

The Artificial Cell instantaneously defines return upon instantaneous determined variance.
