

ASTRAL WIND GENERATOR  
(disjunction frequency)

by

Philip Mazeikas

CONCEPT:

Instantaneous return upon interval of stasis differential of inert variant dimensional entropy defines congruence.

BLUEPRINT:

Instantaneous pressure upon invariable gravitational measure defines instantaneous proximate denial upon variable dimension.

SYNOPSIS:

Interval derived upon differential of congruence of static field and inert axis measures one.

SCHEMATIC:

VACUUM

*"return"*

→

DIODE

*"variance"*

→

TRANSISTOR

*"integral measure"*

→

OSCILATOR

*"inert limit"*

→

PRISM

*"limit"*

→

GAMMA WAVE

*"gravitational field"*

→

PHOTON

*"pressure"*

DESIGN:

The vacuum defines dislocated field. The diode enters instantaneous absolute. The transistor inverts dimensional limit. The oscilator defines axis. The prism displaces derivative upon rationalized matrice. The gamma wave determines interval upon zero. The photon measures force.

POSTULATE:

Threshold beyond dimensional congruence defines dissension.

ENGINEERING:

Postulate upon determined field denies instantaneous interval of determined variance of dislocated axis.

THEORY:

Pressure upon instantaneous interval of velocity enters return.

ANALYSIS:

Threshold upon rationalized variable inertia designates threshold.

CONCLUSION:

Astral Wind Generator measures limit upon fission.

PROSPECT:

Astral Wind Generator enters disjunction upon dislocated measure of inert matrice upon dislocated field.
