

MATTER MORPH
(elemental transfiguration)

by

Philip Mazeikas

CONCEPT:

Instantaneous pressure upon influx of derived determinant vestige of proximate analogous pressure denies inversion.

BLUEPRINT:

Dislocated variance upon integral return denies instantaneous limit.

SYNOPSIS:

Interval upon dissension determines threshold upon dissension.

SCHEMATIC:

DELTA WAVE

"indeterminant"

→

DIODE

"threshold"

→

ZINC

"pressure"

→

ULTRAVIOLET

"inversion"

→

VACUUM

"variable return"

→

JOULE

"designated field"

→

ION

"displacement"

DESIGN:

The delta wave inverts threshold upon determinant postulate. The diode returns variant inert frequency. The zinc determines instantaneous limit. The ultraviolet measures congruence. The vacuum defines invariable pressure. The joule derives instantaneous designated measure. The ion inverts pressure upon inert determined field.

POSTULATE:

Inert threshold upon inverse frequency defines dissension.

ENGINEERING:

Derivative upon differential of designated threshold of inert variance enters limit.

THEORY:

Instantaneous dislocation defers incongruent field.

ANALYSIS:

Threshold upon displaced invariable field determines vestige of determined limit.

CONCLUSION:

Matter Morph inverts stasis upon variant dissension.

PROSPECT:

Matter Morph designates inverse limit upon determined inertia.
