

THE ARKITEK  
(video game console)

by

Philip Mazeikas

CONCEPT:

Designated return upon invariable limit determines invariable designated field.

BLUEPRINT:

The transmission upon a release inborn of static dismissal invariable of pressure denotes all value result of an interpreted and unjuxtaposed value of determined strength, the limit of calculation invariable of pressure denoting value upon threshold of limit, the pressure inborn of sequence to determine the threshold of an intermediary value determining the result of a static inversion.

SYNOPSIS:

Limit of dissension unjuxtaposed beyond the limit displaced upon a static release of inverse measure defines and determines congruent frequency.

SCHEMATIC:

OHM

*“derivative”*

→

MAGNESIUM NITRATE

*“measure”*

→

ULTRAVIOLET

*“determined variance”*

→

TRANSISTOR

*“limit”*

→

MERCURY

*“threshold”*

→

CELL

*“determinant”*

DESIGN:

The ohm dislocates invariable pressure. The magnesium nitrate defers instantaneous limit. The ultraviolet returns velocity. The transistor designates field. The mercury inverts. The cell instantaneously derives static measure.

POSTULATE:

Inversion upon displaced velocity returns.

ENGINEERING:

Determined variable limit designates frequency.

THEORY:

Instantaneous limit derives pressure.

ANALYSIS:

Threshold upon designated interval defines measure.

CONCLUSION:

The Arkitek inverts pressure.

PROSPECT:

The Arkitek defines invariable field.
