

THE CRUCIBLE
(navigation device)

by

Philip Mazeikas

CONCEPT:

Dislocated interval upon instantaneous quotient of derivative of intermediary limit of static dissension enters prelocated measure upon intermediary proximate juncture of instantaneous inertia.

BLUEPRINT:

Inert proximate dislimit upon inverse limit defines incongruence upon derivative of analogous threshold of designated field.

SYNOPSIS:

Postulate upon reposed derivative of static incongruence denies variable function.

SCHEMATIC:

MAGNET

“interposition”

→

DIODE

“pressure”

→

NITROGEN

“axis”

→

SILVER

“proximate function”

→

INFRARED

“determinant”

DESIGN:

The magnet denies variable limit of instantaneous frequency. The diode defers measure upon interval of proximate gravitational axis. The nitrogen enters threshold upon function of derivative of static measure. The silver dislocates variance. The infrared derives field.

POSTULATE:

Denial upon instantaneous derivative of variant dislimit defers measure.

ENGINEERING:

Interval upon incongruent dislimit of instantaneous measure denies variable axis.

THEORY:

Disjunction upon intermediary proximate recourse denies variant field.

ANALYSIS:

Postulate upon threshold of dislocated variable function of proximate axis enters value.

CONCLUSION:

The Crucible defines instantaneous proximate function.

PROSPECT:

The Crucible enters intermediary limit.
