

THE DRAGON  
(perpetual regain of energy)

by

Philip Mazeikas

CONCEPT:

Interval of deposited rectification upon function of dissension of value derives congruence.

BLUEPRINT:

In the exact and constant variable of frequency, the regain of instant exact and measured instant return of magnitude towards regain of impact designates the return of all returned.

SYNOPSIS:

Designated velocity of inborn return of threshold of velocity determines one.

SCHEMATIC:

MAGNESIUM

*“threshold”*

→

CIRCUIT

*“determinant influx”*

→

OSCILLATOR

*“return”*

DESIGN:

The magnesium derives static postulate upon differential of invariable axis and instantaneous limit. The circuit denies threshold upon determinant variance. The oscillator defines magnitude upon invariable inertia.

POSTULATE:

Pressure upon dislocated return of static interval defines instantaneous velocity.

ENGINEERING:

Dislimit upon congruent dislocated acceleration enters invariable threshold of determined integer.

THEORY:

Dissension upon frequency of inert measure defines instantaneous pressure.

ANALYSIS:

Postulate upon variant dimension of variable inertia defines incongruent determinant of instantaneous axis.

CONCLUSION:

The Dragon defines variant pressure upon instantaneous definition of derivative of interval.

PROSPECT:

The Dragon enters recourse upon invariable static dislimit.
