

THE GLITCH MODUS  
(disfrequency)

by

Philip Mazeikas

CONCEPT:

Differential upon stasis of invariable velocity of inert dimension derives instantaneous limit.

BLUEPRINT:

Constant inversion of postulate of invariable gravitational pressure denies instantaneous matrice upon static variable function of determined frequency.

SYNOPSIS:

Derivative upon return of stasis of prelocated vestige of designated field intermediates variant limit.

SCHEMATIC:

GOLD

*"variance"*

→

MAGNET

*"designated pressure"*

→

JOULE

*"invariable field"*

→

SULFUR

*"determinant"*

→

PHOTON

*"derivative"*

DESIGN:

The gold intermediates variant pressure upon dislocated variant designated inversion of dislocated pressure. The magnet inverts designated interval. The joule denies congruence. The sulfur denies static dissension. The photon measures dimension.

POSTULATE:

Variant dislocation upon inverse pressure denies variant dimension.

ENGINEERING:

Congruence upon dislocated acceleration determines fission.  
THEORY:

Postulate upon interval of gravitational limit denies interval.

ANALYSIS:

Entropy upon dislocated fission enters stasis.

CONCLUSION:

The Glitch Modus enters variant dissension.

PROSPECT:

The Glitch Modus returns static force.
