

THE GNOBE
(frequency telephone)

by

Philip Mazeikas

CONCEPT:

Designated field upon interval of inert pressure defines variable.

BLUEPRINT:

In limit, the pressure in the threshold of determined space results upon invariable static dimension and pressure of influx determining value of static release.

SYNOPSIS:

The limit inborn upon a static release of determined force of rectified integer of postulated value rectifies in congruent pressure.

SCHEMATIC:

GOLD

“variant”

→

JOULE

“designated return”

→

PRISM

“threshold”

→

ALKALINE

“pressure”

→

ION

“field”

DESIGN:

The gold inverts pressure. The joule derives instantaneous limit. The prism defies static variance. The alkaline designated measure. The ion inverts threshold.

POSTULATE:

Pressure upon dislocated field defines interval.

ENGINEERING:

Inert limit designates one.

THEORY:

Gravitational return upon dislocated measure inverts.

ANALYSIS:

Instantaneous field derives static interval.

CONCLUSION:

The Gnober defines threshold.

PROSPECT:

The Gnober instantaneously defers limit.
