

THE INVATRIX
(instant microwave)

by

Philip Mazeikas

CONCEPT:

Pressure upon inverse threshold of proximate quotient of static determined entropy enters instantaneous return.

BLUEPRINT:

In static delivery upon a matrice, the limit inborn unjuxtaposed beyond value invariable denotes frequency beyond resistant and invariable longitudinal matrice to influx a measure denoting all systematic and variable form.

SYNOPSIS:

Limit displaced beyond the rectified measure of postulated variance of determined variable pressure determines value.

SCHEMATIC:

ION

"threshold"

→

VACUUM

"measure"

→

GOLD

"variance"

→

ALPHA WAVE

"inverse quotient"

→

TRANSISTOR

"variable"

DESIGN:

The ion dislocates inert longitudinal variance upon determined pressure. The vacuum denies threshold upon integral measure. The gold determines instantaneous inertia. The alpha wave deters congruence. The transistor designates inert postulate.

POSTULATE:

Instantaneous limit upon deference of field enters invariable recourse.

ENGINEERING:

Dislocation upon integral field enters instantaneous quotient.

THEORY:

Postulate upon return of static interposition of frequency defines congruence.

ANALYSIS:

Dissension of static longitudinal axis of interval enters postulate.

CONCLUSION:

The Invatrix defines measure upon interval of static pressure.

PROSPECT:

The Invatrix determines congruence upon interval of instantaneous inertia.
