

THE LIGHT CYCLE  
(instant washer & dryer)

by

Philip Mazeikas

CONCEPT:

Determinant vestige upon invariable limit defines congruent dimension.

BLUEPRINT:

In indeterminant measure, the limit upon a fixed interval of instantaneous inversion of limit and pressure determines an instantaneous release of inversion of value juxtaposed upon release.

SYNOPSIS:

The limit disborn upon a sequence of inversion and variable dissension upon static measure results in intermediary limit of sequence.

SCHEMATIC:

ULTRAVIOLET

*“designated field”*

→

PRISM

*“invariable pressure”*

→

POTASSIUM

*“determined variance”*

→

SILVER

*“dimensional limit”*

→

DELTA WAVE

*“velocity”*

DESIGN:

The ultraviolet defines measure. The prism defines instantaneous deferred threshold. The potassium designated interval. The silver instantaneously measures field. The delta wave derives gravitational pressure.

POSTULATE:

Interval upon instantaneous field derives release.

ENGINEERING:

Pressure upon dislocated variance determines field.

THEORY:

Instantaneous limit defers inversion.

ANALYSIS:

Definition upon variable dimension measures velocity.

CONCLUSION:

The Light Cycle defines variance.

PROSPECT:

The Light Cycle derives static return.
