#### THE REM (video format)

by

## Philip Mazeikas

## CONCEPT:

Designated field derives instantaneous threshold.

## BLUEPRINT:

In static fission the determined restitution of all measure invariable of a fission denoting release unjuxtaposed beyond instantaneous threshold influx beyond value returns.

### SYNOPSIS:

Limit inborn beyond rectified limit of determined variance of limit of congruent measure defines longitudinal variance of determined axis.

## SCHEMATIC:

```
ULTRAVIOLET

"return"

→

ION

"designated threshold"

→

OHM

"derivative"
```

### DESIGN:

The ultraviolet defines limit. The ion inverts static pressure. The ohm measures field.

### POSTULATE:

Derivative upon variant limit defines inert field.

### ENGINEERING:

Threshold upon variant limit dislocates.

## THEORY:

Inertia upon variant field inverts.

# ANALYSIS:

Designated inert gravitational return defines variable.

CONCLUSION:

The Rem defines static return.

PROSPECT:

The Rem postulates variant field.
