#### UI (flight suit)

### by

# Philip Mazeikas

### CONCEPT:

Designated pressure upon dislocated axis of dimensional return derives instantaneous limit.

### **BLUEPRINT**:

All but the regress upon indivisible limit determines no longitudinal regress upon the solidified and immeasurable regress upon the constitutional form upon the limit of form, the matrice of denotation implicit upon all but the limit inborn upon the solidified and regressive determinant factor upon all but the solidified and immeasurable return.

### SYNOPSIS:

Pressure disengaged upon a proximate and variable displaced limit exceeds the pressure of determined axis.

# SCHEMATIC:

```
MAGNET

"derivative"

→

DELTA WAVE

"instantaneous pressure"

→

OHM

"designated field"

→

ULTRAVIOLET

"dimension"
```

#### DESIGN:

The magnet inverts dislocated function of dimension limit. The delta wave designates interval upon differential of instantaneous pressure and invariable limit. The ohm determines field upon variance. The ultraviolet instantaneously derives gravitational measure.

#### POSTULATE:

Gravitational limit upon displaced inversion of designated threshold of invariable pressure determines field upon instantaneous frequency.

### ENGINEERING:

Threshold upon derivative of instantaneous inert pressure defines instantaneous field.

#### THEORY:

Derivative upon sequential limit of instantaneous interval of static measure inverts.

#### ANALYSIS:

Determined measure upon variable pressure dislocates.

### CONCLUSION:

The UI defines instantaneous dimensional variance.

#### PROSPECT:

The UI instantaneously returns threshold upon differential of gravitational variance and instantaneous derivative of determined field.
