

THE MIZIV
(musical instrument)

by

Philip Mazeikas

CONCEPT:

Dissolution upon variant congruence enters prerequisite variable stasis.

BLUEPRINT:

In the event of collision of value upon the designated form, the resistance towards the constant of instant collision determines the value.

SYNOPSIS:

The limit disborn upon a frequency of interval denotes the limit of influx upon the measure.

SCHEMATIC:

PRISM

“denied variable field”

→

GAMMA WAVE

“threshold”

→

HYDROGEN

“field”

→

ALKALINE

“pressure”

→

SILVER

“derivative”

DESIGN:

The prism denies variable congruence. The gamma wave enters prelocated axis. The hydrogen dislimits prerequisite force. The alkaline defers measure. The silver returns variable function of interval.

POSTULATE:

Derivative upon recourse of static pressure enters prerequisite variable field.

ENGINEERING:

Postulate upon instantaneous quotient of static determined axis denies variable inertia.

THEORY:

Postulate upon determined threshold of instantaneous measure enters requisite function of axis.

ANALYSIS:

Pressure upon inverse coordinate return derives stasis.

CONCLUSION:

The Miziv determines variable limit.

PROSPECT:

The Miziv enters requisite field.
