

THE OBSCIL
(theater projector)

by

Philip Mazeikas

CONCEPT:

Differential upon repose upon inverse determined field enters prelocated variance.

BLUEPRINT:

The determined value inborn upon a static limit is of the limit influx juxtaposed beyond all threshold in a dissimulation unjuxtaposed for the static value.

SYNOPSIS:

Imprecise and determined variable force of dissension of frequency of static return determines variable.

SCHEMATIC:

DIODE

"pressure"

→

ULTRAVIOLET

"inverse congruence"

→

PHOTON

"field"

→

ALPHA WAVE

"static derivative"

→

CARBON

"determinant"

DESIGN:

The diode returns variant dislimit upon requisite function of determined field. The ultraviolet measures designated interval. The photon enters requisite axis. The alpha wave determines variable force. The carbon derives instantaneous congruence.

POSTULATE:

Variable force upon inverse threshold of static measure denies interval.

ENGINEERING:

Pressure upon dissension of derived postulate returns.

THEORY:

Derivative upon requisite field of instantaneous quotient of function denies measure.

ANALYSIS:

Postulate upon interval of static congruence denies denotation.

CONCLUSION:

The Obscil returns variant function of intermediary value.

PROSPECT:

The Obscil defines threshold upon instantaneous measure.
