

ASTRAL THRUST
(variable force)

by

Philip Mazeikas

CONCEPT:

Instantaneous quotient upon derivative of intermittent congruence upon displaced frequency enters variable limit.

BLUEPRINT:

Analogous derivative of measure denies intermittent variable stasis.

SYNOPSIS:

Interval upon displaced variant field denies coordinate interposition.

SCHEMATIC:

ION

"directive"

→

VACUUM

"interval"

→

MEGAWATT

"displacement"

DESIGN:

The ion derives congruent pressure. The vacuum enters postulate upon derived stasis. The megawatt defines intermediary variance.

POSTULATE:

Definition upon inverse coordinate field enters displacement.

ENGINEERING:

Pressure upon interval of static variable threshold of analogous measure defines threshold.

THEORY:

Postulate upon deferred variant frequency defines intermittent field.

ANALYSIS:

Instantaneous quotient upon variable pressure dislocates.

CONCLUSION:

Astral Thrust defines instantaneous juncture upon definition of proximate gravitational function of axis.

PROSPECT:

Astral Thrust enters force.
