

# GROSS DOMESTIC PRODUCT QUOTIENT

by

Philip Mazeikas

Indivisible return upon variant incongruent axis upon determined measure enters variant interposition upon deposition of instantaneous variable field.

Presupposition upon determined value enters variant determined prerequisite function upon indivisible limit upon instantaneous proximation upon threshold of inordinate frequency of intermittent prerequisite recourse of designation of value.

Designated variant field upon integral threshold of instantaneous measure enters variant requisite limit.

Interposition upon refrain of intermittent interval of coordinate field denies interposition upon variant sequential derivative upon instantaneous indivisible function of analogous determined measure.

Frequency upon determined variable threshold of intermittent coordinate juncture upon dislocated variance of return upon threshold of inordinate field defines congruence.

Presupposition deferred upon indivisible variable redress upon juxtaposition of determined measure derives coordinate function upon instantaneous integral field.

Juncture upon interposition of inordinate function of coordinate derivative of analogous refrain denies juxtaposition upon integral intermittent prerequisite axis of designated value.
