

THE BIRDLIGHT
(animal light)

by

Philip Mazeikas

CONCEPT:

Differential upon variant integral postulate upon remand of stasis upon field enters dissolution.

BLUEPRINT:

Pressure denied beyond congruent vestige of coordinate limit of axis of deferred measure enters return.

SYNOPSIS:

Postulate upon variable dislimit upon insequential derivative of axis of threshold of measure denies coordinate.

SCHEMATIC:

SILVER

“variant threshold”

→

PHOTON

“pressure”

→

MEGAWATT

“postulate derivative”

→

MAGNET

“dimension”

→

ULTRAVIOLET

“field”

DESIGN:

The silver enters prelocated measure upon integral dimension of static resonance of variable derivative of function of one. The photon displaces variable threshold of intermittent coordinate. The megawatt denies field. The magnet enters prelocated integral value upon deposited measure. The ultraviolet defines coordinate.

POSTULATE:

Pressure upon deposition of refrain upon incongruent vestige of function of limit denies threshold.

ENGINEERING:

Postulate upon remand of coordinate field denies variable.

THEORY:

Pressure denied upon incongruent limit of function upon threshold of axis denies value.

ANALYSIS:

Threshold upon variant limit of coordinate function of absolute measure denies coordinate.

CONCLUSION:

The Birdlight defines magnitude upon variable pressure.

PROSPECT:

The Birdlight derives coordinate.
