

THE MAINFRAME
(coordinate control)

by

Philip Mazeikas

CONCEPT:

Interposed variable coordinate upon refrain of stasis upon intermediary function of derivative of force enters dislocated measure.

BLUEPRINT:

Prelocated variant frequency upon derived congruence of interanalogous function of quotient of gravitational field denies threshold.

SYNOPSIS:

Variant limit juxtaposed beyond variable fission of dimensional return denies coordinate.

SCHEMATIC:

JOULE

"interposed variable congruence"

→

INFRARED

"variant limit"

→

OSCILLATOR

"function"

→

RECTIFIER

"measure"

→

BETA WAVE

"threshold"

→

ION

"frequency"

DESIGN:

The joule denies entropy. The infrared enters prelocated measure. The oscillator defines coordinate. The rectifier dislimits juncture upon variable quotient of interposed dimension. The beta wave derives limit. The ion derives instantaneous measure upon variable force.

POSTULATE:

Intermediary threshold upon function of limit denies variance.

ENGINEERING:

Pressure designated upon variant threshold of frequency denies calibration.

THEORY:

Postulate deferred upon return of stasis of intermediary variance defines coordinate.

ANALYSIS:

Quotient upon repose of interanalogous function of value enters return.

CONCLUSION:

The Mainframe denies coordinate.

PROSPECT:

The Mainframe enters postulate.
