

VIRLOOM
(textile function)

by

Philip Mazeikas

CONCEPT:

Interposed variable regress upon indivisible limit of stasis upon remand of intervariable quotient of measure enters calibration.

BLUEPRINT:

Postulate derived upon coordinate field of threshold upon intervariable threshold of congruence denies differential of stasis and interposed measure.

SYNOPSIS:

Pressure derived upon coordinate function of axis of instantaneous return enters variable.

SCHEMATIC:

OSCILLATOR

"return"

→

DECIBEL

"limit"

→

ALPHA WAVE

"threshold"

→

ULTRAVIOLET

"function"

→

VOLT

"designation field"

→

AXIS

"gravitational quotient"

DESIGN:

The oscillator enters variable force. The decibel returns function upon designated frequency of determined inertia. The alpha wave derives congruence. The ultraviolet defers coordinate. The volt enters requisite pressure. The axis derives threshold upon disjunction of value.

POSTULATE:

Proximate refrain upon coordinate of limit denies threshold.

ENGINEERING:

Quotient of absolute function of variable pressure denies coordinate.

THEORY:

Proximate juncture upon invariable measure derives quotient upon absolute limit.

ANALYSIS:

Pressure derived beyond congruence of absolute threshold of function denies inertia.

CONCLUSION:

Virloom enters calibration.

PROSPECT:

Virloom derives stasis upon proximate function.
