

THE ANTI INVERSION MACHINE

(weather cure)

By

Philip Mazeikas

CONCEPT:

Refrain of contortion of imminent disclosure of variable distinct and immeasurable premise of coordinate pressure upon coordinate threshold of field enters axis.

BLUEPRINT:

Dimension of allocative and analogous field upon metric of distinguished and variant premeasure of affirmation of axis of determined return of electromagnetic determined variance, enters pressure.

SYNOPSIS:

Axis in determined pronoun upon returned variance upon internment of analogous dimension of atomic pressure denies one.

SCHEMATIC:

PHOTON

(measure)

->

AXIS

(pressure)

->

WATER

(dissension)

->

MEGAWATT

(variable limit)

->

VACUUM

(internment)

DESIGN:

The photon inverts dissension of measure in calibrated threshold of magnetism. The axis measure determinant. The water mediates pressure. The megawatt defines threshold upon imminent and procured variance of internment of variable fission. The vacuum derives congruence.

POSTULATE:

Isolation in variable quotient of nuclear variable premise of intonation upon magnetic limit deters pressure.

ENGINEERING:

Disclosure of variable amplitude of atomic refrain of pressure defines absolute.

THEORY:

Contortion of axis in pronoun upon invariable limit deters contortion.

ANALYSIS:

Variable axis of limit enters zero.

CONCLUSION:

The Anti Inversion Machine derives pressure in absolute metric of field.

PROSPECT:

The Anti Inversion Machine postulates variance.
