The Artificial Moon

By

Philip Mazeikas

Interposition upon degree of retention of allocative function of regress upon denotation of gravitational metric of field enters zero.

Inordinate function upon return of metric of solidarity of field, denies not.

Preliminary value, beset upon variance of limit, upon denotation of calculative metric of function of absolute gravity, denotes immeasure.

Concordance, upon preliminary value, upon dislocation of variance upon terrestrial metric of value upon denoted intermediary quotient of pressure, enters limit.

Intermediary dislocation, of value, upon imminent and dislocated variance upon variable function of absolute entropy of field, returns.

Measure, in absolute congruence of amplitude of gravitational inertia, defers threshold upon interposed degree of absolute pressure.
