

THE UNIVERSAL LAW

Philip Mazeikas

Revolution

$$\mu \sqrt{IK} = L^M$$

Order, in return of selective count, interns.

Inorder

$$\pi^L = A\Phi^H$$

Measure, denoted variable, retains.

Limit

$$\Sigma\Psi - J^\Sigma = A^\pi$$

Integer, returned, isolates.

Absolute

$$\Phi \prod E - Q = H^R$$

Selection, invariable, measures.

Enumeration

$$I + H = \Omega H$$

Property of interval, enters coordinate.

Cooccurrence

$$\lambda \sqrt{A} = P \int J^H$$

Function, disjointed, returns.

Integer

$$\pi + G^A = LQ^M$$

Power, upon denomination, selects.

Record

$$\Sigma P \sqrt{H} = Q$$

Isolation, confers.

Isolation

$$I \frac{J}{\Omega} = L^A$$

Variable, defers.

Retention

$$LK \int H = A^K$$

Value, interns.

Interval

$$\Psi \int J - K = AQ$$

Constant, functions.

Proper

$$P\mu^Q = AQ$$

Value, measures.

Measure

$$\lambda \int K + A = K^G$$

Record, functions.
