

AORDER NW

BY

PHILIP FRANCIS MAZEIKAS

$$\Sigma^K \frac{L}{4} = M^A \delta L^K$$

Sin consort upon preeminent directive of aperture of cosin retention of calculable field, denies.

Power, in clause, upon refrain of consort of preeminent interval of stasis, derives zero.

Longitudinal variance, upon vertex of state of integer, recurs.

Inert axis of analogous threshold of internment of cosin retention, avails pique.

Limit, upon coordinate, in threshold of sin integer of axis, incurs gravity.
