

BAARPOX

(recurring order power plant)

PHILIP FRANCIS MAZEIKAS

CONCEPT

Measure in tonation of disjunction of dimension and return of calculable atomic retention of wave property, allocates intermediary consort of variable entropy in cosine internment of variance of tonation of perfect field.

BLUEPRINT

Entropy in cosine endurance of dimension, interns cosine integrity of property of mass in conjunction of field and asymmetry of denominator of quotient.

SYNOPSIS

Longitudinal remand in tonation of field and wave entropy, confers isolation in disjunction of pressure and allocated internment of variable atomic property of selection.

SCHEMATIC

DELTA WAVE

“selection”

KILOWATT

“recourse”

DESIGN

The delta wave isolates material concordance of field in threshold of atomic pique. The ion interns selection of mass. The carbon derives stasis. The hertz calculates material intermediary of longitudinal constant. The oscillator interns selection of intonation of atomic return. The kilowatt returns variable mass in selection of annotative entropy of sin entropy of concordance of intermittent quotient.

POSTULATE

Intonation of variance, in derivative of atomic field, incurs entropy.

ENGINEERING

Operative entropy of cosine endurance of mitigation of dimension, selects intonation of material property of denotation of atom.

THEORY

Intermediary quotient of variance, upon tonation of selection of atomic interval, interns selection of derivative of pressure.

ANALYSIS

Longitudinal property of sin entropy of calculable singularity of internment of entropy, confers retention upon mitigation of property of derivative of wave return.

CONCLUSION

Derivative of pressure, in atomic disjunction of selection of mass, endures property.

PROSPECT

Entropy in wave internment of force, confers isolation in tone of variance upon return of calculable property of selection of retention.
