

# **ENERGYPORT**

(longitudinal operative wave field)

PHILIP FRANCIS MAZEIKAS

## **CONCEPT**

Operative intermediary retention of atomic mitigation of constant returns appropriated limit upon retention of operative selection of inertia of volume upon remand of torque of isometric variance upon threshold of gravitational internment of entropy of calculable derivative of retention of order.

## **BLUEPRINT**

Entropy in mass, upon internment of allocated nuclear selection of threshold of operative mitigation of field returns.

## **SYNOPSIS**

Force, in tonation of internment of volume upon gravitational operative influx of internment of space and entropy, remands internment of force of endurance in tonation of isolation.

## **SCHEMATIC**

MEGAWATT

“limit”

→

QUARK

“isolation”

→

NUCLEAR WEAK FORCE

“isolation return”

→

JOULE

“retention”

→

KILOWATT

“remand”

## **DESIGN**

The megawatt returns calculable isolation of meter of stasis. The quark interns selection. The nuclear weak force interns mitigation of atomic interval of pressure. The joule enters mass. The kilowatt returns isometric congruence upon tonation of gravity.

## **POSTULATE**

Derivative of retention of meter of congruence of atomic inertia, confers isolation.

## **ENGINEERING**

Limit in denotation of field of denotation of gravity, enters selection in term upon selection of isolation of pique of calculable retention.

## **THEORY**

Denotation of atom, in congruence of field, upon entropy of mass, incurs zero.

## **ANALYSIS**

Limit in pressure upon gravitational metric of stasis, enters material field.

## **CONCLUSION**

Limit in congruence of denial of entropy, regains internment in tonation of atomic derivative of longitudinal entropy of variance of retention of inertia.

## **PROSPECT**

Operative flux of internment of force, confers isolation.
