

# UNIVERSAL/EASYMODEMROUTER

(isolation operative selection)

PHILIP FRANCIS MAZEIKAS

## CONCEPT

Limit in denotation of isometric retention of selection of field, in concordance of limit of pressure, defers selection in tense of remand in tonation of pique of isolation in threshold of atomic operative influx of retention of calculable mitigation of constant.

## BLUEPRINT

Operative retention in atomic mass, upon sin retention of atomic interval of gravity, interns calculable retention of mass.

## SYNOPSIS

Limit, in deference of isometry, incurs wave pressure.

## SCHEMATIC

CARBON

“internment”

→

HERTZ

“pressure”

→

WAVE ENTROPY

“operation”

→

PORT

“junction”

→

ALPHA WAVE

“isolation”

→

VOLUME

“pique”

→

DIODE

“threshold”

→

MEGAWATT

“remand”

## **DESIGN**

The carbon determines value upon denotation of retention of pressure. The hertz calculates retention in mass upon denominator of surplus of denotation. The wave entropy incurs gradient. The port interns operative influx of amass. The alpha wave measures calculable mitigation of atomic entropy. The volume mitigates derivative of field. The diode enters measure. The megawatt interns calculable retention of isometric quotient of mass and wave inertia.

## **POSTULATE**

Isolation in measure, upon retention of mass, incurs derivative.

## **ENGINEERING**

Gradient in tone of field upon remand of selection, incurs sin operative influx of gravity.

## **THEORY**

Operative flux of pressure, in concordance of retention of pique of atomic interval, interns calculable measure.

## **ANALYSIS**

Operation of influx derivative of intonation of field, incurs zero.

## **CONCLUSION**

Mitigation in surplus of denominator of pique of pressure, isolates.

## **PROSPECT**

Internment of retention of pique of atomic entropy, isolates.
