

## **WOEDI**

(propulsion abnormality)

PHILIP FRANCIS MAZEIKAS

## **CONCEPT**

Quotient of return in denotation of membrane concordance of pressure, interns selection of mass in denotation of proponent of caliber of derivative of isolation.

## **BLUEPRINT**

Operative entropy in calculable selection of isolation of pique of atomic retention, interns zero.

## **SYNOPSIS**

Operative influx of denominator of quotient of electron, incurs entropy.

## **SCHEMATIC**

ALPHA WAVE

“pressure”

QUARK

“force”

## **DESIGN**

The alpha wave recurs isolation upon tense of variance. The mirror allocates denotation upon property of constant. The wave form interns isolation upon term of constant of denotation. The megawatt confers selection upon tone of variance of derivative of pressure. The proton derives congruence. The ohm calculates retention in cosine record of variable isometry. The diode returns calculable internment of denotation of material. The cosine pressure isolates mass in denominator of field. The quark measures internment of property of negative allocation of entropy.

## **POSTULATE**

Selection of meter, in calculable internment of entropy, incurs pressure.

## **ENGINEERING**

Derivative of pique of atomic endurance of field, confers endurance in tonation of longitudinal selection of mass.

## **THEORY**

Isolation in cosine retention of mass, incurs property.

## **ANALYSIS**

Retention in field upon coordinate interval of force, endures property.

## **CONCLUSION**

Entropy in coordinate influx of pressure of atomic isolation, returns variable coordinate inertia in composite of field and electron.

## **PROSPECT**

Force, in conjunction of pressure and pique of retention, confers denotation.
