

INANIMATE INTO ANIMATE

PHILIP FRANCIS MAZEIKAS

$$\Sigma F = \lambda^H$$

Entropy in calculable internment of variable axis of preliminary volume of denominator of intrinsic derivative of surplus of innate pressure, interns isolation in pressure of concordance of threshold of atomic retention of selection.

Mitigation in surplus of denial of threshold of atomic internment of value of isolation of pressure of denotation of negative volume, refrains concordance in tonation of variable concordance of mitigation of retention of surplus of axis of field.
