

HEAVEN'S GATE

(fabricated generatable wall)

PHILIP FRANCIS MAZEIKAS

CONCEPT

Innate entropy of selection of atomic interval of congruence of field, confers zero.

BLUEPRINT

Hertz composite of retention of allocated integer of material axis of pressure, confers one.

SYNOPSIS

Innate dissolution of membrane concordance of atomic retention of mass, measures denotation in surplus of retention of nuclear internment of force.

SCHEMATIC

CARBON

“limit”

→

QUARK

“isolation”

→

INFRARED

“operation”

→

ELECTRICITY

“measure”

→

TORQUE

“mitigation”

→

KILOWATT

“retention”

DESIGN

The carbon isolates material axis of pressure. The quark returns mass. The infrared determines magnitude of inert membrane. The electricity interns capacity of material derivative of force. The torque retains material inertia. The kilowatt measures congruence of value.

POSTULATE

Selection in internment of force, confers arbitration of zero.

ENGINEERING

Derivative of denial of mass, concludes isolation.

THEORY

Selection in atomic internment of force, confers negative internment of variable pressure.

ANALYSIS

Juncture upon mass of tonation of material entropy, concludes isolation of selection of entropy.

CONCLUSION

Juncture upon polarity of retention of atom, confers artificial field.

PROSPECT

Hertz mitigation of surplus of denotation of atomic mass, retains operative quotient of material and selection of force.
