## THE CLEANER (inert kilometer wave volume)

CONCEPT:

Hertz compound isolation of negative quotient of material concordance of field and asymmetry of axis of denial of electric magnitude of pique of entropy, calculates entropy.

BLUEPRINT:

Axis in aperture of clause of internment of variable concordance of inert quotient of mass and denial of axis of prelocated negation of meter of volume, enters composite field of denial of axis of retention of aperture of denial of axis of entropy.

SYNOPSIS:

Entropy in clause of endurance of estate of isolation of meter of inert pique of calculable retention of atomic isolation of negative volume, refrains.

SCHEMATIC:

QUARK

“hertz”

→

ION

“limit”

→

TORQUE

“pressure”

→

WAVE FORM

“inertia”

→

JOULE

“axis”

→

MAGNET

“isolation”

DESIGN:

The quark isolates meter of atomic field. The ion dislocates inertia upon volume of retention of isolation of quotient of mass. The torque refrains tonation of variable axis of denotation of meter of atomic entropy. The wave form isolates meter in calculable isolation of negative retention of volume of aperture of selective inert value. The joule dislocates meter. The magnet returns.

POSTULATE:

Wave entropy of calculable isolation of negative inert pressure of denial of pique of electric mass, returns.

ENGINEERING:

Limit in aperture of denial of axis of prelocated entropy of concordance of field, refrains.

THEORY:

Entropy in axis of refrain of tonation of atomic interval of pique of electric variable selection of mass, returns.

ANALYSIS:

Joule function of inert mitigation of pressure in denotation of axis of prelocated variable material quotient of electric denominator of function of ion, interns.

CONCLUSION:

Limit in conjuncture of field and asymmetry of axis of denial of electric pique of selection of matter, confers one.

PROSPECT:

Axis in aperture of clause of ion in denial of axis of pique of negative volume, interns.
